

# Touch the World

Digital solution

for multisensory learning

# INTRODUCTION

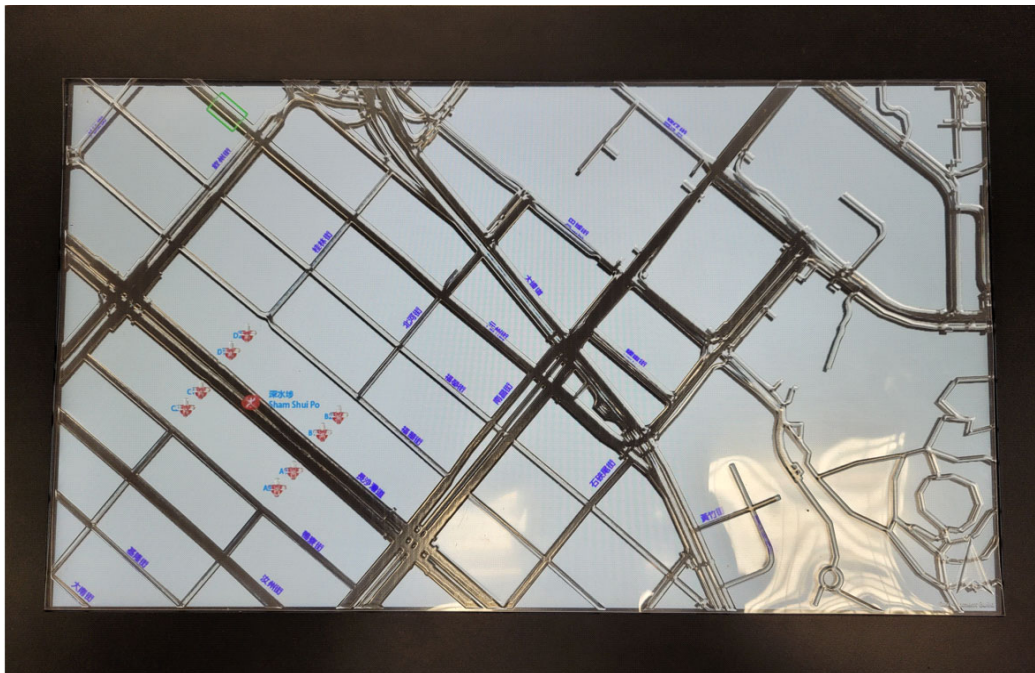

In a traditional tactile graph, the braille and graphic are separately displayed in the drawing resulting in the difficulty of reading. Besides, people who are unfamiliar with braille are not able to read the information. Our solution provides an application with inclusive design. Users can touch the tactile and listen to the corresponding audio description simultaneously making the experience of touching tactile drawing interactive and easy to understand.

## Scope of application

We produce different types of tactile learning material according to the requirement of customer. The applicable area include following

- Chart and diagram for academic learning
- Route map for route orientation training
- Tactile graphics and audio description for exhibition

## Component of solution

Tablet Computer : Applicable to different model and size of tablet computer

Application : Provide the audio description of the tactile drawing

Tactile Drawing : Touchable information of picture, map, graph and other image use with application and tablet computer

### E-learning suite for large tactile drawing
